Done requirements

- Initialized database using Code First of Entity Framework 6
- Built in authentication classes were decided to not be used
- Initial class diagram for ApplicationUser, Admin, User

What will be done today

- Implementation of ApplicationUser, Admin, User
- Token and authentication
- Web services for login, register, show all users.

Current obstacles

- The project is filled with auxiliary classes that are reminiscent of the ASP.NET MVC template Microsoft provides. This needs cleanup.
- Implementation language is forcing us to create multiple classes for each concerning entity in the system.

Current Trello workspace
